

Start now your smart change

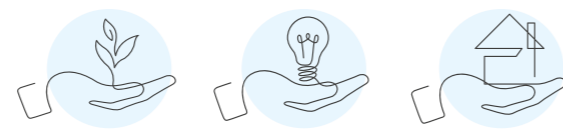

Regalgrid[®] is the [real-time energy management platform](#) that brings the user into the digital energy era and the Energy Community.

regalgrid.com

Regalgrid® is the energy services platform that allows you to access intuitive tools to wisely manage your energy resources.

With the SNOCU your home will be ready to participate to an energy community to share clean energy locally generated and stored and consumed. Start offsetting your energy bill and take full control of your PV system, solar batteries and heat pump.

Through the monitoring portal and the dedicated App, available for users and installers, it is possible to:

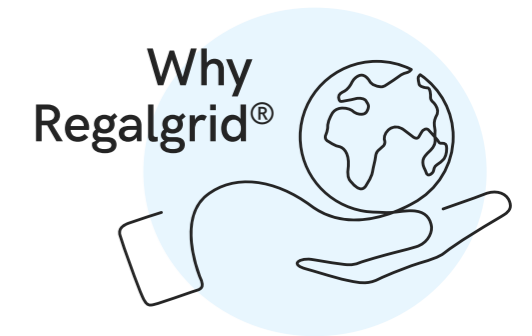

Monitor in real-time consumption, import from the grid, PV generation and battery state of charge.

Compare in real-time, PV and solar battery, heat pump and EV charge station all via the same platform.

Be part of a virtuous network to use, generate and share your clean energy among an energy community made of smart consumers and prosumers like you.

Direct the energy when it is needed the most, domestic heating and hot water are one of the most expensive and important aspect of any house. You can direct the excess of energy to power the heat pump and significantly offset your energy bill.

Electric Vehicle ready to go, with the Regalgrid Platform and APP you can manage the EV charger to make sure that your EV will be ready when you need it. Charge rate will be controlled to make sure you have enough power to run your house while charging the battery.

What we promise?

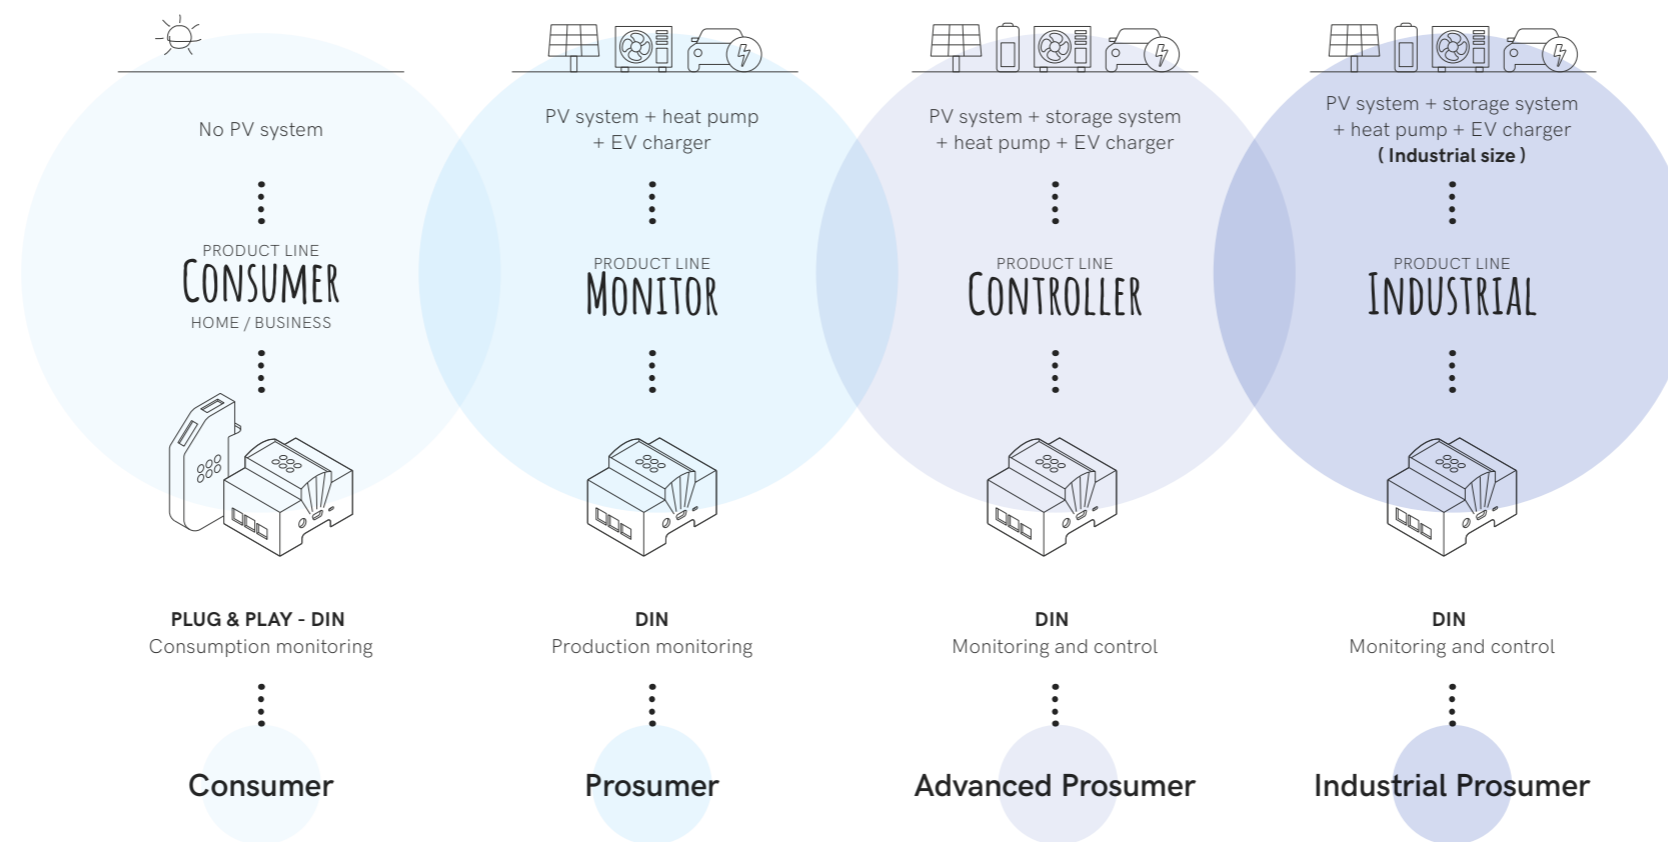

The chance to better generation, share and use of the energy via a smart grid that links consumers and producers.

Why us?

Through a combination of technologies that communicate with all generation systems, energy storage and consumption assets thanks to smart devices from different users. Who can participate? Everyone, from householders to business or government bodies.

Make the impact!

- **Autonomy:** the energy community aim is to balance the production, accumulation and consumption among participants to increase self-sufficiency and independence from the grid.
- **Sustainability:** the energy communities maximise the consumption of clean energy locally generated, reducing the carbon footprint to build a better environment protecting the environment.
- **Savings:** our technology gives you a new tool to control your consumption such as real-time monitoring and special features to reduce your energy bills.

Regalgrid®: your journey towards the Energy Community starts now.

Regalgrid Europe is an innovative technology developer based in Treviso, Italy, with the aim of building up an innovative and sustainable approach to energy management.
